Dashboard
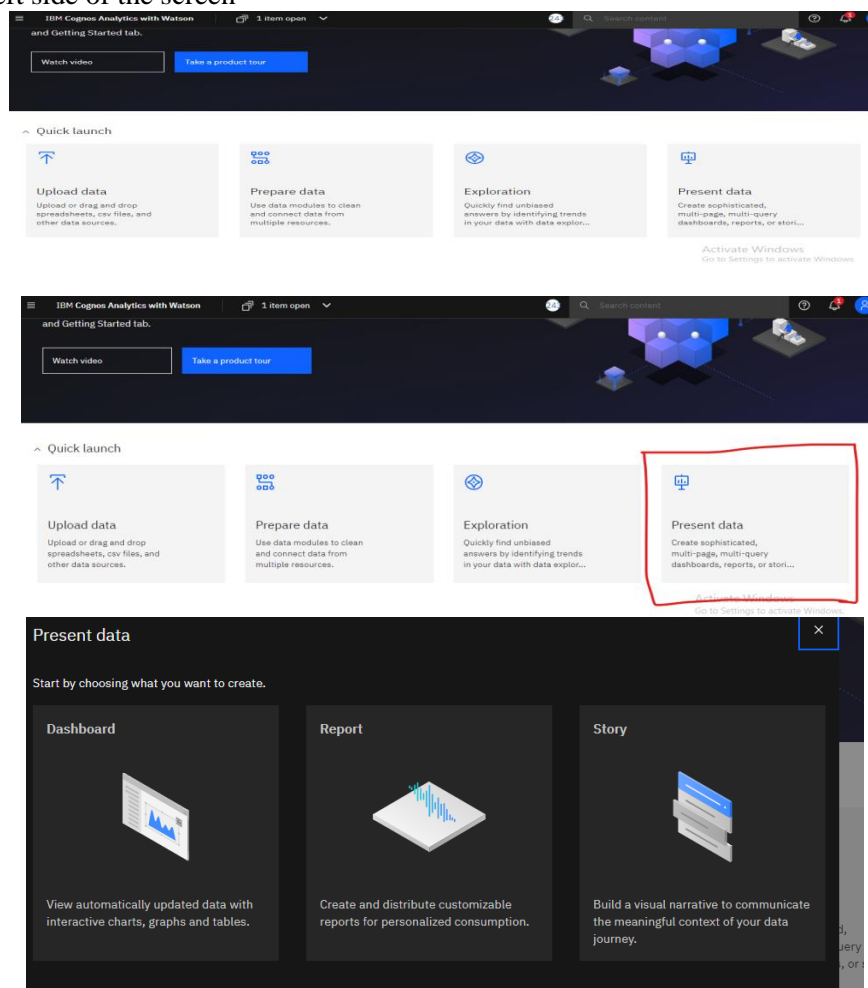

5. Dashboard

A dashboard is a graphical user interface (GUI) that displays information and data in an organized, easy-to-read format. Dashboards are often used to provide real-time monitoring and analysis of data, and are typically designed for a specific purpose or use case. Dashboards can be used in a variety of settings, such as business, finance, manufacturing, healthcare, and many other industries. They can be used to track key performance indicators (KPIs), monitor performance metrics, and display data in the form of charts, graphs, and tables.
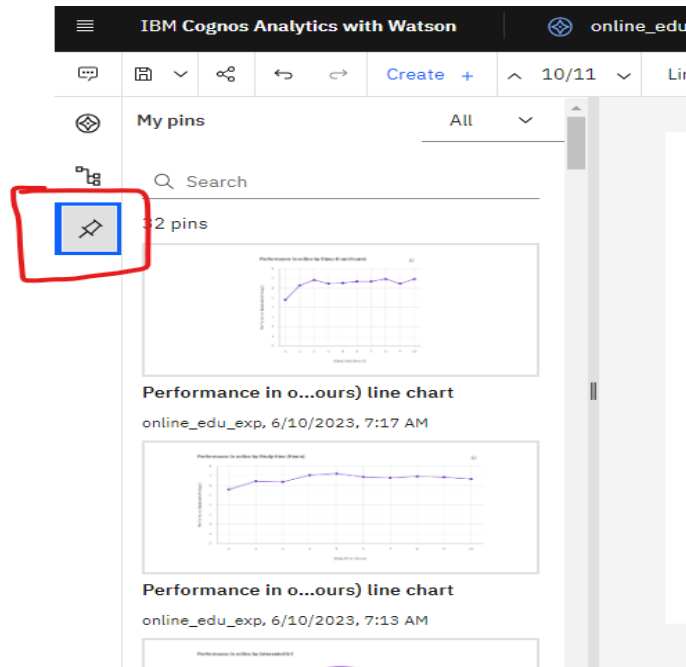

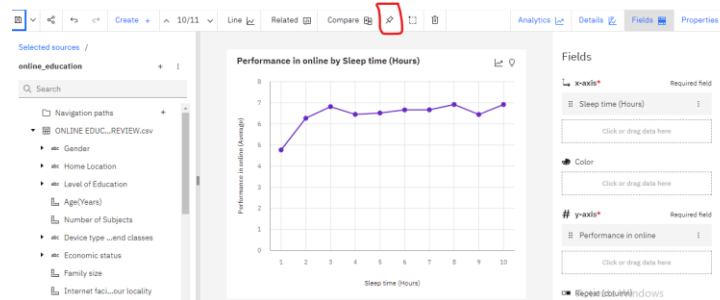

Responsiveness and Design Of Dashboard

The responsiveness and design of a dashboard for online education review data is crucial to ensure that the information is easily understandable and actionable. Key considerations for designing a responsive and effective dashboard include user-centered design, clear and concise information, interactivity, data-driven approach, accessibility, customization, and security. The goal is to create a dashboard that is user-friendly, interactive, and data-driven
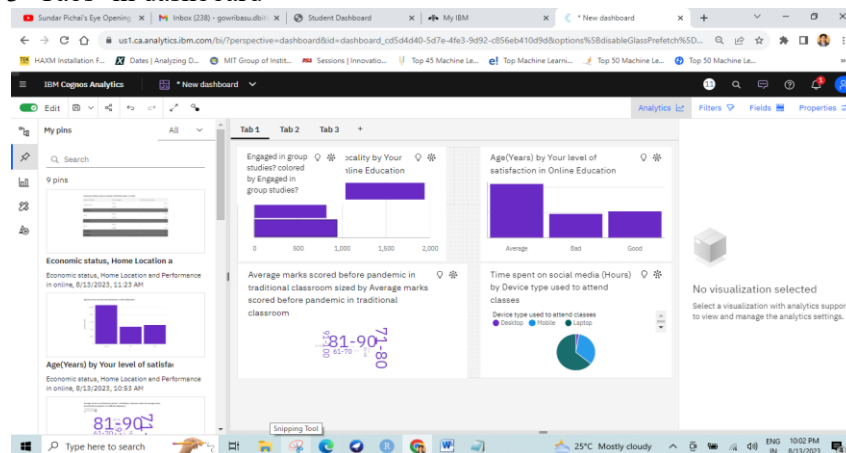

Create a dashboard: Once you have created the explorations, you can create a dashboard by clicking the "present data" option & selecting the dashboard. you can drag the visualizations from the 'pin' option present at the left side of the screen

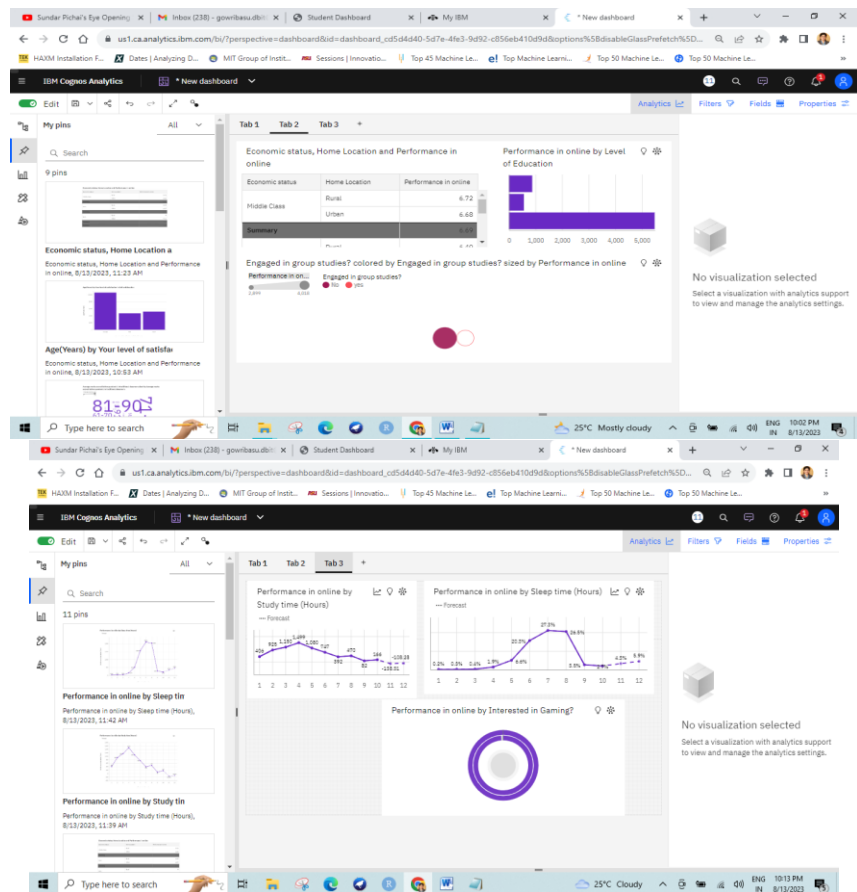

NOTE : whenever you create a visualizations in 'explorations' , make sure to pin them, after pinning the visualization you can drag them on to the dashboard

Dashboard

we have created 3 'Tabs' in dashboard

NOTE: If you want to change to add a background image to the dashboard, click on the widgets option at the left side of the screen and click on the image icon and provide the image address
